

To connect to the RobotCub videoconference you can use either an hardware or software videoconference solution supporting the Audio Video standard H.323.
The IP address to connect to is the following

130.251.68.240

On a windows platform you can use Microsoft NetMeeting (installed by default with Microsoft Windows 2000 or Windows XP) and to connect to the videoconference select the command "*New Call*" from the menu "*Call*" and simply insert the IP address as shown above. If you don't find Microsoft NetMeeting in your Start menu, use the command "*run..*" in the Start menu and then insert "*conf.exe*".

On a Linux platform you can use GnomeMeeting: to connect to the videoconference insert in the URL address field

h323:130.251.68.240

and then click on the "*Connect*" button.
